

Bug Report Template

Bug Title: City dropdown menu does not update correctly when the state is changed.

Environment:

- Browser: Google Chrom version 126.
- Operating System: Windows 11.
- URL: <https://demoqa.com/automation-practice-form>

Step to Reproduce:

- Navigate to the practice form URL.
- Scroll down to the "State and City" dropdown menus.
- Select a state from the first dropdown menu (Example: NCR).
- Select a city from the second dropdown menu (Example: Delhi).
- Go back to the state dropdown menu and select another state (Example: Haryana).
- Observe the "select city dropdown menu .

Expected Result:

When the State is changed, the "Select City" field should automatically clear and become empty, forcing the user to select a new, valid city from the updated list corresponding to the new state.

Actual Result:

The "Select City" field does not clear. It continues to display the city from the *previously* selected state ("Delhi"), even though the state is now " Haryana". This allows the user to submit an invalid combination of state and city (e.g., Haryana, Delhi).

Screenshot:

The screenshot shows a form titled "State and City" with two dropdown menus. The first dropdown menu, labeled "State", has "Haryana" selected. The second dropdown menu, labeled "City", has "Delhi" selected. Both menus have a downward arrow icon on the right side of the selection box.
